Axiu AX-KP8

The machined aluminum chassis of the 8" Android IPC Capacitive Touchscreen provides a unique high-quality finish to suit the most discerning user.

The largest panel in a family of 3 touchscreens, the 8" screen provides users with a huge versatile viewing area. With sizes to suit any user requirements, all panels, 4" 5.5" and 8" come preloaded with the Axiu self-discovery APP, providing plug and play functionality out of the box. The app discovers Axiu amplifiers and automatically loads zone information. Functionality can be expanded and the layout customized with the use of Axiu Design Portal software from www.axiumcontrol.com Customized App designs are uploaded locally with the ability to remotely push changes via our cloud servers.

The dedicated Axiu app provides additional hardware setup functions including brightness and IP configuration.

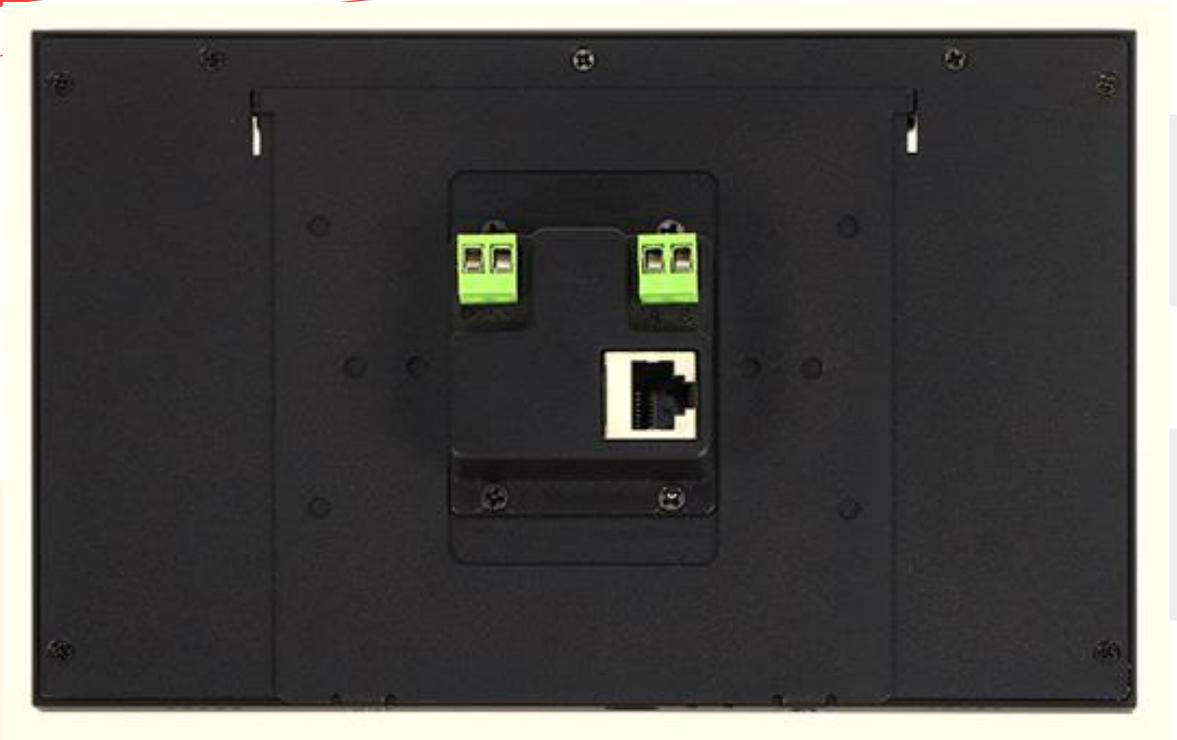

Connectivity is provided via a PoE ethernet port, or 12v DC and Ethernet or Wi-fi communication, ensuring backwards compatibility with previous KPC touchscreen wiring.

An adaptor plate, included with the panel, provides a seamless connection between wall plates and the keypad.
